DETAILED ACTION

Remarks

1. In response to communications files on July 11, 2005, the claims 1, 4, 8-10, 19-26, 28, and 30 are cancelled per applicant's request. Therefore, claims 2-3, 5-7, 11-18, 27, and 29 are presently pending in the application.

Reasons for Allowance

2. Claims 2-3, 5-7, 11-18, 27, and 29 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:
the prior arts of records, neither anticipates nor renders obvious the following limitations as claimed:

As to claims 2, 5, and 11, the prior art of records fail to anticipate or suggest a method of managing information for a plurality of computers in a distributed network comprising the step of:

(A) collecting original data related to each computer and storing the original data in a respective database;

(B) generating an index table including index data for each computer wherein the index data is configured (i) to identify at least a portion of the contents of the original data stored in the database, and (ii) to facilitate access to the databases over the distributed network;

wherein said step of generating an index table includes the substeps of:

producing records in the table characterized by a record type selected from the group comprising a data' base name, a system name, a disk name, a network interface name and a user name; and

producing connection information for each database to facilitate access thereto over the distributed network; and

(C) scanning at least one of the index tables to select databases that match a user query;

(D) accessing the selected databases to retrieve original data and generate an output therefrom, together with the other limitations of the independent claims.

As to claim 27, the prior art of records fail to anticipate or suggest an apparatus for managing information for computers in a distributed network comprising:

a console module coupled to said base database and configured for operation in (i) a first mode to generate a first output based on said summarized data and (ii) a second mode wherein said console module uses said connection information in said index data to facilitate access to said first database to generate a second output;

wherein said first portion of said base database comprises an application table having information relating to usage of application programs;

wherein a plurality of application programs are executed on said first computer by

a user, said application table comprising a corresponding plurality of records, one for each application program and user combination, each record having summarized data

comprising statistical information regarding such use of said application programs, together with the other limitations of the independent claims..
